- ✓ Dramatically Improves Taste and Odor
- ✓ Removes Fluoride
- ✓ Removes all Heavy Metals
- ✓ Removes Chlorine and Chloramines
- ✓ Prevents Hard Water Scale
- ✓ Renders Hard Water Harmless
- ✓ Improves Plant Growth
- ✓ Provides Safer, Healthier Water at Faucets in your Home
- ✓ System Typically Works Efficiently for Ten or More Years

How Does the Aquafer Plus Work?

Water entering the Aquafer Plus first encounters our patented catalytic device where the calcium hardness is converted from a dissolved solid to a temporary suspended solid. Dissolved hardness is what causes hard water scale and interferes with soaps and damages water heaters. As a suspended solid, it simply washed through the plumbing with no reaction to pipes or soaps..

Next the water enters the lower tank. It flows upward in a bed of KDF Material (Kinetic Degradation Fluxion KDF-55). The Patented KDF process media reduces or removes chlorine, lead, mercury, iron, hydrogen sulfide, heavy metals and bacteria from the water.

The water then enters the top tank where it contacts a tricalcium phosphate rich blend of minerals that absorb the fluoride and any heavy metals that may have been missed by the KDF.

The water then exits the system through a full port by-pass valve and into your home or facility.

Applications for Residential, Commercial and Industrial

Landscaping and Golf Courses

Improves soil percolation and better root propagation by lowering the surface tension of the water.

Restaurants

Eliminates scale buildup on icemakers, steamers, boilers and makes better drinking water.

Hospitals

Eliminates scale build up on autoclaves, steamers, kidney dialysis machines, dishwashing and laundry equipment, boilers and much more.

Scale Prevention for Car Washes, Cooling Towers, Green Houses and Much More.
